VO VAN TU TAI

Associate Product Owner / Business Analyst · E-Commerce, Mini App & Chat Commerce

(+84) 869 500 573 | tutaivovan@gmail.com | linkedin.com/in/vovantutai | github.com/VoVanTuTai | Portfolio

PROFESSIONAL SUMMARY

Information Systems graduate from IUH (Distinction, GPA 3.26/4.0) with practical hands-on experience in business analysis, system workflows, and operational data. Experienced in gathering requirements, writing clear User Stories with Acceptance Criteria, modeling business flows using BPMN and UML, and testing RESTful APIs via Postman. Familiar with retail e-commerce lifecycles—such as catalog and inventory reservations, payment webhook callbacks, and order status reconciliation—along with designing conversational flows that include fallback rules and smooth handoffs to human operators. Honest, detail-oriented, collaborative, and available immediately for full-time work.

CORE COMPETENCIES & TECHNICAL TOOLING

- **Requirements & Agile Delivery:** Writing clear Business Requirements Documents (BRD), User Stories with Given-When-Then Acceptance Criteria, backlog grooming on Jira, sprint planning support, and UAT test case execution.
- **E-Commerce & Retail Flows:** End-to-end commerce understanding covering product catalog, SKU variants, promotional discounts, temporary inventory reservation (hold) during checkout, payment gateways, fulfillment checkpoints, and status reconciliation.
- **Chat Commerce & Conversational Journeys:** Designing guided customer inquiry flows, automated order tracking lookups, intent classification, fallback handling, and escalation rules to transfer complex queries to human support agents or licensed specialists.
- **Process Modeling & API Integration:** BPMN 2.0 (Camunda Modeler), UML (Activity and Sequence Diagrams), Data Flow Diagrams (DFD), RESTful API payload validation (JSON/OpenAPI 3.0), and researching marketplace webhook schemas (Shopee, TikTok Shop).
- **Data Analysis & Daily Tools:** SQL queries (PostgreSQL, MySQL for order data auditing and status verification), Advanced MS Excel (VLOOKUP, Pivot Tables), Postman (API testing), Jira, Confluence, Figma (screen review), Git/GitHub.

WORK EXPERIENCE

HomeNest Software
Ho Chi Minh City, Vietnam

Business Analyst & Product Support Specialist — Sep 2024 – Present

- **Requirements Elicitation & Backlog Maintenance:** Gathered operational requests from business stakeholders, broke down feature requests into well-structured User Stories with clear Acceptance Criteria in Jira, and helped maintain sprint backlog priorities.
- **Flow Modeling & Screen Specifications:** Mapped user navigation journeys, business rules, and edge cases (input validation, timeout retries, payment failures) with UI/UX designers and developers to ensure alignment before development kick-off.
- **API Payload & Contract Verification:** Used Postman to test backend REST endpoints against technical documentation, checking that response fields, status codes, and error formats matched frontend screens and database schemas.
- **UAT Execution & Bug Tracking:** Executed functional test scenarios during UAT cycles, logged clear defect reports on Jira with step-by-step reproduction and screenshots, and verified fixes with developers prior to release.

J&T Express Vietnam
Ho Chi Minh City, Vietnam

Operations Data & Reconciliation Specialist — Jun 2024 – Sep 2024

- **Order Lifecycle Monitoring:** Monitored parcel transit status across regional hubs and sorting centers, identifying and logging tracking status discrepancies between the central order management system and mobile courier apps.
- **SQL Auditing & Discrepancy Checks:** Wrote SQL queries (joins, aggregations, conditional filters) to verify order status transitions, shipping fee calculations, and COD settlement numbers against operational logs.
- **Operational Support & Documentation:** Documented routine system errors and drafted clear standard operating procedures (SOPs) to help regional hub coordinators troubleshoot tracking sync issues faster.

SELECTED SOFTWARE & PRODUCT PROJECTS

Nexus Express — Distributed Order Management & AI Tracking Platform **[Live Demo ↗]** **[GitHub ↗]** *Independent Project*

NestJS, TypeScript, RabbitMQ, PostgreSQL (3NF), Camunda BPMN 2.0, Redis, Docker Compose, OpenAPI 3.0 Sep 2025 – Feb 2026

- **Order State Machine Modeling (Camunda BPMN 2.0):** Mapped the parcel lifecycle across intake, sorting, transit, and delivery stages; defined strict validation rules at each transition to prevent orders from skipping required operational checkpoints.
- **Conversational Journey & Guardrails:** Built an automated tracking chatbot that parses waybill codes, checks order status, and provides delivery estimates; configured guardrails so queries outside tracking scope are gracefully routed to a human operator fallback.
- **API Contract Consistency & Message Queue:** Authored OpenAPI 3.0 specifications enforcing `Idempotency–Key` headers to avoid duplicate order creation during client retries; used RabbitMQ to queue dispatch events reliably.
- **Live Production Deployment:** Packaged services with Docker Compose and deployed live at **tracking.nexus-ex.site** with SSL encryption, Nginx reverse proxy, and operational health checks.

Hospitality Booking Platform & VNPay Payment Gateway Integration **[GitHub ↗]** *Commercial Web Application*

PHP (OOP, MVC), MySQL 3NF, VNPay Payment Gateway, IPN Webhook, HMAC-SHA512, Docker Mar 2025 – Jul 2025

- **Commerce Flow & Temporary Inventory Hold:** Designed room reservation checkout flow with a 15-minute temporary reservation lock (TTL) to prevent double-booking on high-demand dates during active payment sessions.
- **Payment Webhook & Security Verification:** Integrated VNPay payment gateway via asynchronous IPN Webhook; implemented HMAC-SHA512 cryptographic checksum verification to validate transaction authenticity before order confirmation.
- **Automated Status Reconciliation:** Built background reconciliation logic comparing payment gateway responses with internal order records, automatically releasing reserved availability if payment times out.

E-Commerce Store & Marketplace Integration Research **[GitHub ↗]** *Retail Architecture Study*

PHP OOP, MySQL (ACID Transactions), RESTful APIs, Marketplace API Specifications (Shopee, TikTok Shop) Oct 2024 – Jan 2025

- **Core Retail Mechanics:** Implemented online retail flows including product catalog browsing, SKU variant selection, cart calculations, discount coupon application, and inventory deduction with database transaction locking.
- **Marketplace Integration Research:** Studied open API documentation and webhook mechanisms of regional marketplaces (Shopee Open Platform, TikTok Shop Partner Center), analyzing payload structures for order synchronization and stock level updates.

EDUCATION

Industrial University of Ho Chi Minh City (IUH) *Ho Chi Minh City, Vietnam*

Bachelor of Engineering in Information Systems · GPA: Sep 2022 – 2026 (Completed All Degree Requirements · Available Full-time)
3.26 / 4.0 (Distinction / Giỏi)

- **Relevant Coursework:** Systems Analysis & Design, Database Management Systems (Advanced SQL), Enterprise Resource Planning (ERP - Odoo), Software Engineering, IT Project Management, Service-Oriented Architecture (SOA), Artificial Intelligence Fundamentals.
- **Professional Readiness:** Solid foundation in information systems, clear communication between business users and engineering teams, modest work ethic, and full readiness for immediate full-time onboarding.
