PROFESSIONAL SUMMARY

Information Systems Engineer (IUH, GPA 3.26/4.0 - Distinction) bridging business strategy and software engineering across **IT Business Analysis & Product Ownership Assistance**. Proven track record in gathering stakeholder requirements, managing Change Requests (CR) to protect Scope Freeze, and authoring rigorous technical specifications (PRD, User Stories Given-When-Then, UAT Scenarios). Solid technical foundation in relational databases (PostgreSQL, MySQL 3NF), BPMN 2.0 process modeling, ERP workflows (Odoo), and RESTful API contracts. Strong technical English documentation reading skills; available immediately for full-time employment.

CORE SKILLS & PLATFORMS

- **Business Analysis & ERP Functional:** Requirements Elicitation, Technical Specs (PRD, SRS, BRD), User Stories (Given-When-Then), ERP Workflows (Odoo: Sales, Purchase, Inventory), UAT Scenarios.
- **Product & Project Delivery:** Agile / Scrum, Backlog Refinement, Scope Freeze & Change Request (CR) Governance, Blocker Resolution, Launch Checklists (App Store / Google Play).
- **Technical & Data:** Relational Database Design (ERD 3NF), **SQL Queries & Data Reconciliation (PostgreSQL, MySQL)**, Power BI Dashboards, RESTful API Contracts (OpenAPI 3.0), Webhooks.
- **Tools & Platforms:** Jira, Confluence, Figma, Camunda Modeler, Draw.io, Postman, Odoo ERP, Power BI, Git / GitHub, Advanced MS Excel.
- **Languages & Communication:** Technical English (Reading technical documentation, API specifications, and basic communication), Vietnamese (Native).

WORK EXPERIENCE

HomeNest Software — Ho Chi Minh City, Vietnam

Business Analyst · PM/PO Assistant (Technical Bridge) — Mar 2026 – Sep 2026

Project: "Hỗ Trợ Cuộc Sống" — Multi-Service Lifestyle & On-Demand Platform

- **Multi-Service Scope Modeling:** Elicited and structured business requirements for an on-demand ecosystem (Home Repair, Ride-hailing, Carpooling, Job Matching, and Super Admin); aligned sprint roadmaps across simultaneous service tracks.
- **State-Driven Dynamic Bidding Engine:** Architected a two-way counter-offer negotiation state machine with TTL expirations and state locks, eliminating concurrency conflicts and order deadlocks for engineering teams.
- **Event-Driven GPS Optimization:** Proposed event-triggered GPS coordinate logging (capturing checkpoints strictly at pickup and delivery triggers), cutting third-party map API costs and device battery drain while maintaining legal audit trails.
- **Technical Specs & Schema Alignment:** Authored PRD, Use Cases, and User Stories (Given-When-Then); collaborated with Tech Lead to validate Figma wireframes against 3NF schemas, eliminating edge-case logic defects before sprint kickoff.

Project: "VietPlus" — C2C Classified Marketplace & Ride-Sharing (South Korea Market)

- **Rapid Backlog Mastery:** Audited backlog items and technical architecture for a localized Korean C2C platform; took full ownership of listing lifecycles, content moderation, and carpooling workflows without delivery disruption.
- **Fulfillment & Dispute Workflow Re-engineering:** Captured client Change Requests to specify state-machine flows and dispute protocols for order fulfillment, automated cancellations, and return/refund processing.
- **Lean MVP Solutioning (Concierge Lead Form):** Strategically recommended a concierge intake form for urgent cross-border shipping requests instead of over-engineering a logistics subsystem, safeguarding sprint Scope Freeze.
- **Commercial Go-Live & UAT Leadership:** Formulated App Store/Google Play launch checklists; conducted functional and smoke testing on staging builds, managed defect triage, and led client UAT acceptance sessions.

WORK EXPERIENCE (CONTINUED)

J&T Express Ho Chi Minh City, Vietnam

Operations Process Coordinator Sep 2025 – Feb 2026

- **One-Way Operational Throughput Optimization:** Identified hub bottlenecks and restructured parcel processing into a closed one-way workflow (Inbound → Weigh → Scan → Dispatch), clearing transit backlogs and boosting shift throughput.
- **Standard Operating Procedure (SOP) Authoring:** Authored standard operating procedures classifying shipment exceptions (routing errors, failed delivery, return-to-origin), establishing explicit cross-shift accountability.
- **SQL Data Auditing & Integrity Reporting:** Formulated daily SQL reconciliation queries comparing physical manifests against enterprise logistics databases; generated audit discrepancy reports ensuring supply-chain data integrity.

REPRESENTATIVE TECHNICAL PROJECTS

Nexus Express — Logistics Order Management & Workflow Engine (OMS) [Live Demo ↗] [GitHub ↗] Distributed Architecture Project

BPMN 2.0 (Camunda), 3NF Relational Modeling, OpenAPI 3.0, PostgreSQL, NestJS, RabbitMQ Sep 2025 – Feb 2026

- **Order Lifecycle Standardization (BPMN 2.0):** Modeled transit checkpoint workflows using BPMN 2.0 on Camunda, strictly coupling order state transitions with physical barcode scan events.
- **API Contract Specification (OpenAPI 3.0):** Authored OpenAPI 3.0 interface contracts for shipment creation and status sync; mandated Idempotency Keys to prevent duplicate records during network retries.
- **Event-Driven Audit Logging:** Architected an event-driven status tracking stream using RabbitMQ and PostgreSQL, maintaining tamper-proof history logs for shipment auditing.
- **Live RAG & Tool Calling Assistant:** Specified functional requirements for an AI Customer Assistant grounded on logistics policies, auto-extracting booking details and triggering online dispatch APIs.

Multi-Role Hospitality Booking & Management Platform [GitHub ↗] Application Software Project

Concurrency Control (TTL Hold), RBAC, VNPay IPN Webhook, MySQL, Express.js Oct 2025 – Dec 2025

- **Sprint Breakdown & Overbooking Prevention:** Decomposed product roadmap into sprint deliverables; designed a 15-minute temporary room hold mechanism (TTL Hold), eliminating overbooking race conditions during peak hours.
- **Role-Based Access Control (RBAC):** Architected a 3-tier permission matrix (Customer, Host, Admin), enforcing security boundaries and tenant data isolation across accommodation partners.
- **Payment Webhook Integration & Idempotency:** Specified asynchronous payment flows using VNPay IPN Webhooks with HMAC-SHA512 checksum validation; ensured robust transaction reconciliation despite network disruptions.
- **Dynamic Cancellation Policy Modeling:** Formulated tiered refund policies with automated real-time inventory release, maximizing host occupancy rates while maintaining policy transparency.

Song Tai Shop — Full-Stack E-Commerce Platform [GitHub ↗] E-commerce Platform

PHP (OOP & MVC Architecture), MySQL (3NF & ACID), RESTful APIs, JavaScript (Fetch/AJAX), Docker Compose Nov 2025 – Jan 2026

- **E-Commerce Architecture & ACID Concurrency:** Engineered full-stack store with MVC; prevented overselling spikes with ACID transactions (START TRANSACTION, COMMIT) and row locks (SELECT ... FOR UPDATE).
- **RESTful Catalog APIs & Conversational Commerce:** Designed standardized endpoints for products, SKU variants, cart, and orders; mastered buyer journey to specify automated commerce flows.

EDUCATION & BACKGROUND

Industrial University of Ho Chi Minh City (IUH) Ho Chi Minh City, Vietnam

Engineer in Information Systems (Completed all degree requirements · Available Full-Time) Sep 2022 – 2026

- **Cumulative GPA: 3.26 / 4.0** (Distinction / Xếp loại Giỏi).
- **Relevant Coursework:** Enterprise Resource Planning (ERP - Odoo), IT Project Management, Systems Analysis & Design (OOAD/UML), Advanced Database Systems (SQL Queries & Indexing), Software Engineering, Service-Oriented Architecture (SOA).
