

Vo Van Tu Tai

BACKEND / FULL-STACK DEVELOPER INTERN · BUSINESS SYSTEMS

Ho Chi Minh City, Vietnam +84 869 500 573 GitHub Portfolio LinkedIn tutaivovan@gmail.com

BACKEND · FULL-STACK · REST APIS · DATABASES · BUSINESS WORKFLOWS

PROFESSIONAL SUMMARY

Information Systems student building backend-oriented business systems across web, API, and database layers. Built PHP/Express applications and architecture-focused TypeScript/NestJS projects; currently strengthening Java/Spring Boot through DevFlow. Strongest in tracing a workflow across UI, API, and data, then turning it into a practical, documented implementation.

TECHNICAL SKILLS

Languages

PHP, JavaScript, TypeScript; Java 21/Spring Boot foundation

Frontend

HTML/CSS, Bootstrap, EJS; React/Vite project work

Backend

PHP/MySQL, Node.js/Express, REST APIs, session auth; NestJS and Spring Boot project work

Database

MySQL, SQL, ERD; PostgreSQL/Prisma and MongoDB project work

DevOps & Tools

Git, GitHub, Postman, Docker Compose; RabbitMQ/Kafka/Redis project exposure

Analysis

ERD, database design, BPMN, OpenAPI reading, and API concepts

SELECTED PROJECTS

Selected Projects · Business Applications + Backend Architecture

PHP/MySQL · Express/EJS/MySQL · TypeScript/NestJS · REST/OpenAPI · Git · Docker

- **Nexus Express · Reliability case: Challenge:** one shipment crosses merchant, ops, hub, courier, tracking, and COD flows, creating unclear ownership and duplicate-processing risk. **Action:** organized 12 domain services behind a Gateway/BFF, assigned database ownership, and applied RabbitMQ events, outbox, and idempotency patterns. **Outcome:** produced a traceable end-to-end workflow across five client apps with OpenAPI contracts and Docker-based local infrastructure.
- **Tourist Accommodation Platform · Multi-role case: Challenge:** customer booking, provider inventory, and admin moderation required different permissions while sharing room and booking data. **Action:** designed session-based role guards and separated search, booking, cancellation, room CRUD, moderation, payment, and reporting flows. **Outcome:** delivered an Express/EJS/MySQL application with VNPay/QR pages, email support, and PDF/Excel exports.
- **Song Tai Shop · Maintainability case: Challenge:** the original student project was difficult to run consistently and needed stronger admin authorization and destructive-action handling. **Action:** added role checks, improved authentication and database operations, moved deletion to POST flows, and created Docker Compose, seed data, and demo documentation. **Outcome:** made the PHP/MySQL shop easier to review locally while preserving customer checkout and admin product/order workflows.

OPERATIONS EXPERIENCE

Post Office Operations Staff

Dec 2025 – Mar 2026 · Full-time

J&T Express

- Handled branch logistics, shipment processing, inventory control, and daily operations.
- Applied hands-on shipment knowledge when modeling workflows for **logistics-management-system**.

EDUCATION

Industrial University of Ho Chi Minh City (IUH)

2022 – Present
HCMC, Vietnam

Bachelor of Information Systems · GPA: 3.22/4.0 · Expected Graduation 2027

RELEVANT COURSEWORK

Data Structures & Algorithms

Web Application Development

Service-Oriented Programming

System Analysis & Design

Database Management Systems
