Vo Van Tu Tai

IT Business Analyst · Project Coordinator · Process Optimization & Digital Transformation

(+84) 869 500 573 | tutaivovan@gmail.com | linkedin.com/in/vovantutai | github.com/VoVanTuTai | Portfolio

PROFESSIONAL SUMMARY

Information Systems Engineer (IUH) bridging business strategy and engineering delivery across **IT Business Analysis & Project Coordination**. Proven track record in gathering stakeholder requirements, managing Change Requests (CR) to safeguard **Scope Freeze**, and authoring clear technical specifications (**PRD, User Stories Given-When-Then, UAT Scenarios**). Strong technical foundation in **SQL database querying, ERP systems (Odoo), RESTful APIs, and process automation (BPMN 2.0 / Webhooks)**. Available for immediate full-time employment.

WORK EXPERIENCE

HomeNest Software — Ho Chi Minh City, Vietnam

Business Analyst · PM Assistant — *Mar 2026 – Sep 2026*

▸ **Project 1: "Hỗ Trợ Cuộc Sống" — Multi-Service On-Demand Community Platform**

- **Multi-Service Architecture & Scope Modeling:** Analyzed business requirements for a comprehensive community lifestyle ecosystem encompassing on-demand Home Repair (Thợ sửa chữa), Short-trip Ride-hailing (Chuyến xe ngắn tức thời), Carpooling (Xe ghép), Job Matching (Việc làm), and a centralized Super Admin portal; coordinated delivery alongside **"VietPlus"** (Classified marketplace & community carpooling platform for the South Korea market).
- **State-Driven Price Negotiation (Dynamic Bidding Acumen):** Solved transaction deadlocks and customer-provider pricing disputes by architecting a **state-driven counter-offer negotiation engine** (propose ↔ counter-bid ↔ accept/reject with automated TTL expiration); specified strict race-condition guards and status locking that eliminated requirement ambiguity for engineering.
- **Event-Driven GPS Cost Optimization:** Addressed severe third-party map API budget overhead and driver device battery drain by replacing continuous high-frequency GPS polling with an **event-driven checkpoint refresh mechanism** (capturing location strictly upon order pickup and completion triggers); substantially reduced third-party map API consumption and eliminated driver device battery drain while preserving legally defensible proof-of-service records.
- **Engineering Specifications & Edge-Case Defense:** Authored comprehensive PRD, Use Case specifications, and testable User Stories (Given-When-Then) with complete data dictionaries; conducted 3-way alignment sessions (BA, UI/UX, Lead Dev) to validate Figma prototypes against relational schemas, preventing edge-case logic defects before sprint execution.

▸ **Project 2: "VietPlus" — Classified Marketplace & Community Carpooling Platform (South Korea Market)**

- **Mid-stream Onboarding & Domain Control:** Onboarded mid-project into an active delivery cycle; rapidly audited backlog items, architecture, and localized business rules to establish complete BA ownership over ad listing lifecycles, content moderation, and carpooling coordination without onboarding disruption.
- **Fulfillment, Cancellation & Return Re-engineering:** Directly engaged clients to capture critical Change Requests (CRs); designed state-machine specifications and dispute protocols for **order fulfillment, automated cancellation triggers, and return/refund workflows (hoàn hàng)** between buyers and sellers.
- **Lean MVP Solutioning (Vietnam–Korea Shipping Module):** Evaluated client request for a cross-border logistics service; diplomatically proposed and specified a **concierge Service Intake / Lead Form** (enabling platform staff to manually coordinate and fulfill orders) instead of over-engineering an automated logistics engine, protecting **Scope Freeze** and delivery deadlines.
- **Go-Live Advisory, Functional QA & UAT:** Formulated formal Meeting Minutes and a **Commercial Launch Checklist** (App Store, Google Play, credentials, policies); performed hands-on **functional & smoke testing** on dev builds against User Stories, managing defect triage to secure smooth UAT client sign-off.

J&T Express — Ho Chi Minh City, Vietnam

Operations Process Coordinator (Full-time) — *Sep 2025 – Feb 2026*

- **Field Process Re-engineering & Throughput Optimization:** Observed sorting floor bottlenecks handling high-volume daily shipments; engaged frontline crews to replace chaotic multidirectional handling with a streamlined closed-loop unidirectional sorting flow (Intake → Weigh → Scan → Dispatch), substantially accelerating turnaround times and eliminating floor bottlenecks with full team buy-in.
- **Standardized Exception SOPs & Dispute Prevention:** Authored standard operating procedures (SOP) categorizing operational anomalies (misroutes, delivery failures, RTOs); established equitable accountability boundaries that eliminated inter-shift friction and blame-shifting.
- **Data Reconciliation & Database Integrity Reporting:** Instituted daily cross-verification protocols between physical delivery manifests and logistics system logs; delivered daily SQL discrepancy reports to senior management, guaranteeing end-to-end supply chain data integrity and cross-shift reconciliation accuracy.

SELECTED TECHNICAL PROJECTS

Multi-Role Service & Online Booking Platform [GitHub ↗] Software Application Project

Concurrency Control, Role-Based Access Control (RBAC), VNPay API, MySQL, Express.js *Oct 2025 – Dec 2025*

- **Milestone Management & Concurrency Control:** Planned feature deliveries across sprints; engineered temporary reservation holds (Held/Pending with TTL expiration), preventing duplicate bookings before checkout completion.
- **Role-Based Access Control (RBAC):** Architected a secure permission matrix across 3 stakeholder groups (Customers, Service Hosts, System Admins), guaranteeing privacy and independent partner business data segregation.
- **Payment Gateway Integration & Webhooks:** Specified asynchronous payment flows via **VNPay IPN Webhook** with cryptographic checksum hashing; designed automated reconciliation logic to guarantee transaction reliability despite browser interruptions.
- **Automated Availability Modeling:** Formulated automated time-bracketed cancellation rules, automatically releasing reserved availability back to the public calendar in real time to optimize partner revenue.

Nexus Express — Logistics Order Management & Workflow Engine (OMS) Distributed Architecture Project

[Live Demo ↗] [GitHub ↗]

BPMN 2.0 (Camunda), 3NF Relational Data Modeling, OpenAPI 3.0, PostgreSQL, NestJS, RabbitMQ *Sep 2025 – Feb 2026*

- **Automated Process Modeling (BPMN 2.0):** Modeled end-to-end parcel state transitions across transit checkpoints using **Camunda BPMN 2.0**, enforcing automated transition gates triggered by physical barcode scans.
- **Inter-Service API Specifications:** Authored comprehensive **OpenAPI 3.0** contracts for order dispatch and cross-service status sync; incorporated idempotency key mechanisms to prevent duplicate payload processing during network anomalies.
- **State Consistency & Auditing:** Designed event-driven state logging with RabbitMQ, maintaining an immutable history of transit status changes for tracking accuracy.

CORE COMPETENCIES & TECHNICAL SKILLS

Business Analysis & ERP Functional: Requirements Elicitation, Technical Specs (PRD, SRS, BRD), User Stories (Given-When-Then), ERP Workflows (Odoo: Sales, Purchase, Inventory), Defect Triage, Scenario-based UAT.

Project Coordination: Agile / Scrum Delivery, WBS Breakdown & Sprint Tracking, Scope & Change Request (CR) Management, Blocker Removal, Commercial Go-Live Checklists.

Technical & Data: Relational Database Design (ERD 3NF), **SQL Queries & Data Reconciliation (PostgreSQL, MySQL)**, Power BI (Dashboards), RESTful API Contracts (OpenAPI 3.0, Postman), Webhooks.

Tools & Platforms: Jira, Confluence, ClickUp, Figma, Camunda Modeler, Draw.io, Postman, Odoo ERP, Power BI, Git / GitHub, MS Excel.

Languages & Communication: English (Professional Working Proficiency — Technical specs & stakeholder collaboration), Vietnamese (Native).

EDUCATION

Industrial University of Ho Chi Minh City (IUH) Ho Chi Minh City, Vietnam

Bachelor of Engineering (B.Eng.) in Information Systems · GPA: 3.26 / 4.0 *Sep 2022 – 2026 (Completed All Degree Requirements · Available Full-time)*

- **Relevant Technical & Management Coursework:** Enterprise Resource Planning (ERP - Odoo), IT Project Management, Systems Analysis & Design, Database Systems (Advanced SQL Queries & Reporting), Software Engineering, Data Structures & Algorithms, Service-Oriented Architecture (SOA).
