SUMMARY

Final-year Information Systems student with a solution-oriented analytical mindset, combining hands-on BA experience at **HomeNest Software** with frontline operational problem-solving at **J&T Express**. Proven strength in untangling ambiguous requirements, designing concurrency/overbooking controls, and formalizing workflows via **BPMN 2.0 (Camunda)**. Proficient in translating complex business logic into clear **PRD/SRS**, testable **User Stories (Given-When-Then)**, and data schemas for Dev/QA teams. Seeking the **Business Analyst (Fresher)** role at **Bizitrip** to solve real product challenges and bridge business stakeholders with engineering.

EDUCATION

Industrial University of Ho Chi Minh City (IUH)

Bachelor of Science in Information Systems · GPA: 3.26 / 4.0

Ho Chi Minh City, Vietnam

Sep 2022 – Present (Exp. 2027)

- **Supporting Technical Foundations:** Systems Analysis & Design, Database Systems, Software Engineering, Web Development, Data Structures & Algorithms, Service-Oriented Architecture.

WORK EXPERIENCE

HomeNest Software

Business Analyst Intern · PM Assistant

Ho Chi Minh City, Vietnam

Jun 2026 – Sep 2026

- **Scope Creep & Shifting Requirement Resolution:** Non-technical client requests created frequent mid-sprint changes; proactively led discovery workshops, used wireframes and visual process flows to align expectations, formalized Meeting Minutes (MoM), and instituted Scope Freeze baselines before sprint planning.
- **Edge-Case Logic Discrepancy Elimination:** Dev and QA teams held conflicting interpretations of boundary-case error handling; standardized User Stories with **Given-When-Then** acceptance criteria and defined a shared Data Dictionary, ensuring engineering alignment before coding.
- **Resource-Constrained Backlog Prioritization:** Faced a bloated feature backlog under tight sprint deadlines; collaborated with the PM to score user stories by business value versus technical complexity, trimming non-essential scope to maintain on-time feature release cadences.
- **Handoff Bottlenecks & User Adoption Support:** Users faced onboarding friction with newly released features; constructed role-based UAT verification matrices, pre-tested flows to eliminate blockers, authored quick-reference SOPs, and delivered interactive training sessions.

J&T Express

Logistics Operations Staff (Full-time)

Ho Chi Minh City, Vietnam

Sep 2025 – Feb 2026

- **Peak-Hour Staging Bottleneck Elimination:** Heavy parcel volume (>300 parcels/day) caused severe sorting congestion; observed physical movements and redesigned branch staging into a unidirectional flow (Intake → Weighing → Scan Checkpoints → Route Staging), noticeably cutting courier dispatch turnaround.
- **Operational Exception Handling (Misroutes, Damage, RTO):** Operational failure parcels accumulated due to unclear ownership; formulated standardized error-coded SOPs with defined per-shift resolution windows, preventing parcel stagnation and customer complaints.
- **Physical-to-Digital Status Reconciliation:** Prevented tracking blind spots between signed paper delivery sheets and software logs by instituting an end-of-shift cross-verification routine, ensuring all parcel statuses remained synchronized and auditable.
- **Ground-Truth Operational Insights to System Specs:** Leveraged first-hand operational friction points, scan validation rules, and parcel state transitions into formalized State Machines and realistic data schemas for order management software.

SELECTED PROJECTS

Tourist Accommodation Platform — Multi-Role Travel Booking System

Role Permission Matrix (RBAC), Real-Time Booking State Machine, VNPay API, Express.js, MySQL

Course Project

Oct 2025 – Dec 2025

- **Overbooking & Race Condition Prevention:** Multiple guests attempting to book the same room during high-demand periods risked double-booking; designed a 2-tier validation mechanism with temporary lock states (Held/Pending with TTL timeouts) before confirmation, preventing overbooking.
- **Host-Guest Conflict Resolution on Cancellations:** Balanced guest cancellation flexibility with host inventory protection by modeling a tiered cancellation policy that automatically releases room availability back to the public calendar upon cancellation.
- **Multi-Role Access Control (RBAC):** Guests, Hosts, and Admins accessed shared room data with conflicting privileges; drafted a strict Role-Based Access Control matrix ensuring host inventory data remained completely isolated from other providers.
- **Asynchronous Payment Webhook Resilience:** Addressed network dropouts where users paid but browser redirects failed; specified asynchronous VNPay IPN webhook listeners with checksum verification, ensuring order statuses updated reliably regardless of browser state.

Nexus Express — Logistics & Order Management System (OMS)

BPMN 2.0 (Camunda), Relational Data Modeling (ERD), OpenAPI 3.0 Specs, PostgreSQL, NestJS, RabbitMQ

Academic & Applied Case

Sep 2025 – Feb 2026

- **Tracking Gap Elimination Across Hubs:** Prevented parcel tracking inconsistencies across multi-party handoffs by modeling strict BPMN 2.0 State Machines in Camunda, restricting state transitions only to verified barcode scan events at designated checkpoints.
- **Cross-Service Data Consistency:** Prevented duplicated status updates across 12 microservices during network retries by authoring OpenAPI 3.0 contracts and specifying idempotency keys for scan event payloads.

TECHNICAL SKILLS & LANGUAGES

Analysis & Problem Solving: Requirement Elicitation, Scope Creep Control, PRD & SRS Authoring, User Stories (Given-When-Then), BPMN 2.0, UAT Test Planning, Backlog Prioritization, Exception Flow Modeling.

Domain Knowledge: Travel Tech & Booking Platforms (Dynamic Room Inventory, Overbooking Prevention, Cancellation Rules, RBAC), Online Payment Integration (VNPay API, Webhook IPN), Order Management Systems (OMS, State Machines).

Tools & Platforms: Notion, Jira, ClickUp, Camunda Modeler, Draw.io, Figma, Postman, Git, GitHub, Agile/Scrum.

Technical Foundations: Relational ERD Modeling (3NF), SQL Queries (MySQL, PostgreSQL), RESTful API Specs (OpenAPI 3.0), Microservices Concepts.

Languages: English (Professional Working Proficiency), Vietnamese (Native).
